DESCRIPTION

SMI Aluminum Fitting Covers are deep drawn, 2 piece insulation covers. Designed to protect insulated 90°, 45° and tees from weather intrusion and mechanical damage. SMI fitting covers can be used to protect any type of insulated fitting. They can be used on long and short radius, butt weld, socket weld and screwed pipe elbows from ½" to 10" iron pipe size, inclusive.

SMI currently offers our fitting covers in .024" Nominal Aluminum Alloy. In the future we will offer Stainless Steel.

ADVANTAGES

SMI Aluminum Fitting Covers have been designed to fit over molded, routed and mitered insulation fittings. They are designed to allow for a 7/16" circumferential overlap, and are manufactured to conform to ASTM C-450 Method of Fabrication and ASTM C585 (table 7A) Outer Diameters of Insulation. Descriptive labels affixed to underside of fittings identify interchangeable sizes, rather than listing only one size. This information can help you save valuable inventory space and allows greater flexibility on the jobsite.

RECOMMENDED USES

SMI Aluminum Fitting Covers should be used In areas of heavy mechanical abuse and where corrosion and high temperatures are factors.

SUGGESTED SPECIFICATIONS

Please contact us for a specific recommendation based on your requirements and environment. The elbows should be installed in accordance with MICA (Midwest Insulation Contractors Association) standards.

Fiberglass & Mineral Wool insulation also available, guaranteed to fit.
